
Arçelik

Energy Policy

Within the framework of our vision of “Respecting the World, Respected Worldwide” and adopting the Sustainable Development Goals, as Arçelik and its employees comply with all applicable national and international energy related laws and regulations, continue our activities in line with energy management system based on continuous improvement by providing essential sources. In the geographies that we operate, we;

- Use energy, natural resources and raw materials efficiently for the products and the activities,
- Prefer energy efficient products, technologies, applications and services for the production and the activities,
- Consider energy performance improvements in design and modification of products and production processes,
- Lead the industry in producing ‘the most efficient products’,
- Raise awareness of our employees, our stakeholders, the society and our value chain about energy efficiency and resource efficiency,
- Keep up the competitive new alternative technologies and digital applications and integration them to our activities,
- Consider continues improvement while determining our objectives and goals about energy performance and management,
- Take proactive approach while evaluating risks and opportunities with an energy perspective,
- Encourage our suppliers, sub-contractors and dealers to have the same awareness about energy and environmental issues as Arçelik.

With our above-mentioned principles, we work with all our strength to become a leading organization in our sector by managing our activities in an integrated manner with our sustainability approach within the framework of the Environment, Occupational Health and Safety, Quality Management Systems and Global Business Ethics Principles.
